

PRODUCT CARE

General Cleaning & Maintenance

Soft Surfaces – Upholstery, Mesh, Partitions

1. Use a spray bottle and mix 1 part clear colour kitchen washing up liquid (detergent) with 10 parts of water.
2. Lightly spray on surface to be cleaned so it becomes damp, but not wet. The liquid should not soak through the surface.
3. Leave to dry for 2 minutes.
4. Use a wet/dry vacuum cleaner to remove all moisture from the surface.

Stronger Cleaning for Stains

1. Sprinkle baking soda directly onto upholstered (fabric) furniture or make a paste for a better clean. Mix baking soda in a bowl with water or white vinegar. It should be a paste and not a liquid.
2. Apply Baking Soda Paste to Chair.
3. Use a soft brush (such as a paintbrush) or a microfiber cloth, and apply it in small, gentle strokes. Use circular motions, and do not scrub. Avoid rubbing too hard as this may damage the fabric.
4. Gently rub this paste into the upholstery (fabric). Don't rub too much or the fabric colour will change! Do not get any of this on wooden parts - it may cause cracking.
5. Let It Dry until there is no moisture left.
6. Vacuum It Off.

For Hard Surfaces – Tabletops, Wood, Steel, Plastic

1. Use a damp cloth to wipe surfaces.
2. Use a drop of kitchen washing up liquid (detergent) if required for oily or areas with stains.
3. Make sure cloth is not too wet. Leave to dry.
